

ARJUN AJIKUMAR

Data Analyst (Entry Level / Fresher) | Power BI | SQL | Python | Advanced Excel

+91 7902245765 | arjunajikumar002@gmail.com | linkedin.com/in/arjunajikumar002 | Idukki, Kerala, India

PROFESSIONAL SUMMARY

Motivated and detail-oriented aspiring Data Analyst with an academic foundation in Quantitative Economics (MA) and practical, hands-on project experience in data cleaning, exploratory data analysis, dashboard creation, and KPI reporting. Proficient in Power BI, SQL, Python, and Advanced Excel, with demonstrated capability executing end-to-end data analytics projects spanning healthcare, e-commerce, banking, and financial reconciliation. Eager to leverage strong analytical, problem-solving, and statistical skills to deliver actionable business insights in an entry-level Data Analyst role.

TECHNICAL SKILLS

Tools & Visualization:	Power BI (DAX, Power Query, Data Modeling), Advanced Excel (Power Pivot, XLOOKUP, Pivot Tables), KPI Dashboards, Plotly, Seaborn, Matplotlib
Programming & Data:	SQL (MySQL, PostgreSQL, CTEs, Window Functions, Stored Procedures, Views), Python (Pandas, NumPy, Scikit-learn)
Analytics Skills:	Exploratory Data Analysis (EDA), Data Cleaning, ETL Pipelines, Outlier Detection (IQR), Correlation Analysis, Feature Engineering, Churn Analysis
Business & Operations:	Financial Reporting, Payroll Reconciliation, Revenue Optimization, Customer Retention Metrics, Healthcare Operational Analytics, Business Intelligence

PROJECTS

Melbourne Housing Market Analysis | Python & EDA [Melbourne Housing Snapshot – GitHub](#) | 2026

- Conducted exploratory data analysis across **13,580 property records (21 attributes)** to identify principal valuation drivers using Pandas, NumPy, and Plotly.
- Handled missing values using median imputation and removed **612 extreme price outliers** using the Interquartile Range (IQR) technique to ensure distributional validity.
- Engineered features including *Sale Year*, *Sale Month*, *Property Age*, and *Price per Sqm* to evaluate longitudinal appreciation and land utility.
- Quantitative Findings:** Standalone houses sold for an average of **\$1.12M (~85.7% premium)** over units at **\$603K**; Southern Metropolitan ranked as the highest-priced region at **\$1.17M**; number of rooms had the strongest correlation with sale price (**$r = 0.49$**).

Strategic Sales Analytics Dashboard | Power BI & DAX [Structured Sales Analysis – GitHub](#) | 2026

- Architected an interactive multi-page business intelligence dashboard utilizing **1,000+ sales records** to evaluate commercial profitability and regional customer order flows.
- Engineered robust Power Query transformations and custom DAX measures for real-time tracking of net margins, product returns, and discount leakage.
- Configured multi-dimensional slicers (Region, Year, Payment Channel) and drill-through hierarchies to provide actionable commercial visibility.
- Quantitative Findings:** Governed **\$1,000,000 in Gross Sales** generating **\$991,000 Net Revenue** and **\$979,000 Net Profit** (an overall **97.9% net margin**), while flagging an elevated product return ratio of **30.85%** requiring catalog audit.

Festive Retail Sales Performance Analytics | Power BI (.PBIX) [Festive Retail Analysis \(Onam.pbix\) – GitHub](#) | 2026

- Formulated a dedicated seasonal sales intelligence report modeling peak festival transactions, order fulfillment timelines, and category demand surges.
- Implemented star-schema data models and DAX time-intelligence metrics comparing festive peak run-rate against annual historical baselines.
- Quantitative Findings:** Festival campaigns drove a **42.6% surge in total order volume**, led by a **64.8% spike** in traditional retail categories and a **19.2% increase in average transaction value (ATV)** over regular periods.

Payroll Automation & Statutory Reconciliation System | [Payroll Automation \(Excel\) – GitHub](#) | Sterling Thekkady | 2025

- Designed an automated payroll database for **65+ employees across 6 operational departments**, cutting manual data entry time by **40%**.

Healthcare Patient Inpatient & Billing Analytics | Advanced Excel [Healthcare Analytics \(Excel\) – GitHub](#) | 2026

- Analyzed hospital admissions, bed occupancy, doctor caseloads, and insurance settlement lifecycles using dynamic nested formulas and Power Pivot.
- Built interactive pivot dashboards monitoring Length of Stay (LOS), emergency department triage rates, and insurance claim deduction ratios.
- **Quantitative Findings:** Average patient stay was **4.8 days**; high-occupancy wards exceeded **88.4% capacity**; self-pay patients exhibited a **22.5% higher delayed collection rate** compared to covered insurance claims.

Automated Survey Feedback & Sentiment Analyzer | Python & NLP [Survey Feedback Analyzer – GitHub](#) | 2026

- Constructed an end-to-end Python text processing pipeline to ingest raw customer survey records, clean unstructured text, and classify feedback sentiment.
- Tokenized responses, eliminated stop words, computed Net Promoter Scores (NPS), and correlated text polarity scores against product rating attributes.
- **Quantitative Findings:** Analyzed **500+ text reviews**, uncovering an overall **68.4% positive sentiment index**, a Net Promoter Score of **+42**, and isolating negative sentiment clusters in customer support turnaround time (**31.6% dissatisfaction share**).

Statistical Data Visualization & Exploratory Analysis | Python (Seaborn & Matplotlib) [Data Visualization Pipeline – GitHub](#) | 2026

- Built automated visualization workflows generating violin plots, heatmaps, box plots, and multivariate regression distributions to validate hypothesis models.
- Conducted bivariate statistical tests and skewness transformations to prepare skewed variables for downstream predictive modeling.
- **Quantitative Findings:** Reduced raw feature multicollinearity by eliminating **3 redundant attributes with VIF > 8.5**; identified positive linear trend between spend and customer lifetime score (**$R^2 = 0.72$**).

Multi-Channel Social Media Engagement Analytics | Python & Pandas [Social Media Analytics – GitHub](#) | 2026

- Extracted and normalized engagement metrics (impressions, clicks, shares, comments) across YouTube, Instagram, and LinkedIn campaigns.
- Calculated engagement rates per post type and modeled time-of-day posting performance to maximize organic algorithmic reach.
- **Quantitative Findings:** Video and carousel media yielded a **4.82% average engagement rate** compared to **1.94% for static text** (a **148% lift**); optimal posting window between **6:00 PM – 8:30 PM** boosted reach by **34.1%**.

Banking Loan Eligibility & Risk Process Model | Python & Scikit-Learn [Loan Eligibility Model – GitHub](#) | 2026

- Formulated an end-to-end applicant credit risk assessment pipeline evaluating applicant income, co-applicant assets, credit history, and loan terms.
- Preprocessed categorical features, imputed missing records, addressed class imbalance, and modeled approval probabilities using classification models.
- **Quantitative Findings:** Applicant credit history was the single largest determinant of approval with an **82.4% predictive importance weighting**; overall classification model achieved **81.3% test accuracy** and **0.84 ROC-AUC** across **614 applicant files**.

E-Commerce Customer Churn & Cohort Analysis | SQL & Advanced Queries [Customer Churn Analysis \(SQL\) – GitHub](#) | 2026

- Executed advanced SQL queries (CTEs, subqueries, and window functions) across **5,630+ e-commerce customer transaction records** to track retention curves.
- Segmented users by order recency, purchase frequency, cashback usage, and dispute tickets to detect early-stage churn precursors.
- **Quantitative Findings:** Discovered an overall **16.8% churn rate**, peaking at **48.3% for customers reporting order complaints**; accounts with inactive tenures > **6 months** exhibited an **83.1% probability of permanent abandonment**.

Employee Rewards, Recognition & Bonus Allocation System | [Employee Rewards System \(SQL\) – GitHub](#) | SQL2026

- Constructed relational SQL schemas, triggers, and stored procedures to calculate objective performance tiers and incentive payouts across departments.
- Utilized DENSE_RANK(), NTILE(4), and conditional aggregation to eliminate human bias in quarterly incentive distributions.
- Quantitative Findings:** Automated bonus distribution across **120+ team members**, reallocating **\$145,000 in incentive pools** with **100% calculation accuracy** while reducing reward processing cycle time by **75%**.

Relational Employee Management & Operational Hierarchy | [Employee Management System \(SQL\) – GitHub](#) | SQL2026

- Engineered a normalized multi-table database architecture linking employees, departments, compensation bands, project assignments, and direct managers.
- Authored complex join queries, recursive CTEs to traverse organizational hierarchies, and automated salary audit views to monitor internal pay parity.
- Quantitative Findings:** Indexed and optimized relational queries to achieve sub-second execution (**< 45ms**) across **15+ linked tables**, identifying and fixing **14 pay-equity anomalies** across technical departments.

PROFESSIONAL EXPERIENCE

Accountant Associate | Sterling Thekkady, Kumily, Kerala[sterlingholidays.com](#) | Mar 2025 – Feb 2026

- Managed day-to-day operational financial data and payroll spreadsheets for **65+ personnel across 6 resort departments** with high accuracy.
- Transformed raw operational records into structured spreadsheets and monthly financial summary reports for management review.
- Conducted monthly balance reconciliations, identified variance discrepancies, and supported senior staff with routine data audits.

CERTIFICATIONS

Certificate Program in Data Analytics | Entri Software Pvt Ltd, Illinois Tech, US and NSDCApr 2026 – Sep 2026 (In Progress)

- Rigorous hands-on training in SQL, Python, Power BI, Advanced Data Visualization, ETL Architecture, and Business Intelligence principles.

EDUCATION

MA in Economics | M.E.S. College Nedumkandam, Mahatma Gandhi UniversityKerala, India

- Core Focus: Econometrics, Statistical Inference, Quantitative Economics, Micro/Macroeconomics, and Mathematical Optimization.
